

Mike Rasmusson, the Miramar Ranch North (MRN) Grounds Maintenance Manager (GMM) recommends the following landscaping guidelines for the Verizon Wireless Blue Cypress Project/#417873:

- Install faux mono-eucalyptus tree instead of a faux mono-pine tree. Current park area design has recently been changed to an Australian garden landscape.
- Removal of 3 additional pine trees nearby the WCF site. Recent landscape changes removed existing plants at the project site.
- Use of lower growing eucalyptus trees and Australian garden plants in order to blend in heights.

Please contact Mike Rasmusson with any comments or questions regarding his recommendations.
